INTRODUCTION

WATER IS LIFE!

Nearly 97% of the world's water is salty or otherwise undrinkable. Another 2% is locked in ice caps and glaciers. That leaves just 1% for all of humanity's needs – all its agricultural, residential, manufacturing, community, and personal needs.

- <https://www3.epa.gov>

With its large development team and networked water related websites in the background, WATER H2O COIN is set to revolutionise charitable giving, create awareness and help, support the water related causes around the globe.

We are committed to developing and sharing water related solutions for our planet using the latest technologies.

Our aim is to create a decentralised, transparent, democratic and fast blockchain solution in which every time you give money to charity and good causes, you can have total control that your funds are going exactly where you want them.

CHALLENGES

CHALLENGE 1

In the midst of payment gateways for fiat currencies, there are a number of Crypto payment gateways that are rife with problems that does not represent advancement over fiat payment gateway. Identified problems include, high Transaction fee, Low speed of blockchain confirmation, Unfavourable Market Volatility.

CHALLENGE 1, a

Expensive Blockchain Fees

The popular blockchain networks in The Crypto industry have been undoubtedly expensive for an average user due to the exponential growth rate of gas (transfer) fees.

This is a serious concern that scares millions of people away from the crypto markets. Paying up to 50% as a transaction fee is not acceptable.

CHALLENGE 1,b

In the most popular blockchains, a transaction confirmation can sometimes take up to hours and in some cases days, again which is not acceptable.

CHALLENGE 1,c

The agreed and accepted transfer value price can be significantly different amount when it has completed the confirmation round.

CHALLENGE 2

The non-profit sector today is worth an estimated \$2 trillion worldwide, yet headlines in recent times have seen the sector stumble between corruption scandals, gross inefficiencies, false expenses and misuse of funds. At the moment, giving money to charity is a one-directional experience. You give money and you hope it goes where you intended it and unfortunately you have no control or follow up on your donations after that.

CHALLENGE 3

The recipients of these donations live in under developed countries and regions that has limited to no access to banking services and systems.

SOLUTIONS

Revolutionising charitable giving

In the last 15 years we have developed our own network of websites and platforms related to WATER issues on our planet and we are well aware of the main problems/reasons and share them on one of our websites - Water News Resource www.planetswater.com

The blockchain and smart contract technologies are here to change the way we do business, banking charity and live in a transparent and less restricted way and enable the un-banked ([As of 2017, approximately 1.7 billion people remain unbanked in emerging economies](#) -*Wikipedia*) have access to all the financial tools on their mobiles,

WATER H2O coin is deployed on TRON blockchain to take the advantage of the TRON network's unparalleled speed of transaction confirmation (*most transaction are approved and completed within seconds*) and close to zero transaction fees. This way we have eliminated the challenges described in *Challenges section 1,a-b-c*.

We have almost completed our own donations, fundraising and crowdfunding platform at www.h2ocharity.org to eradicate, corruption, inefficiencies and allow the Givers to have full transparency, trust and control on the release of the donations collected for each project by following a simple donation progress map and proof of donations with image(s) or video(s).

THE PLAN

500 million H2O coins are released to public and the rest is frozen for our future Water related blockchain projects.

50 Million coins will be sold in 2 parts (20 + 30 Million) in different price ranges as private and semi public sales through out our networked websites.

Social Media announcements and advertising will invite WATER related registered charities to join WATER H2O community and receive \$100 worth of coins immediately.

Airdrop campaign using our **HYDRATION Smart Contract** will distribute 1 Million coins to 10,000 wallets to increase awareness and usage on our projects.

The **WATERMAKER Smart Contract** and web platform is already deployed and it enables the HODLers of H2O coin, stake and earn 123% Per Year returns and an additional 5% on their referrals.

We are aiming to create a global awareness on WATER H2O coin by rewarding our community and at the same time increasing H2O coins usage, value and market cap.

Water H2O coin can be used to make donations, tip our team, content contributors and purchase services or products on all our websites.

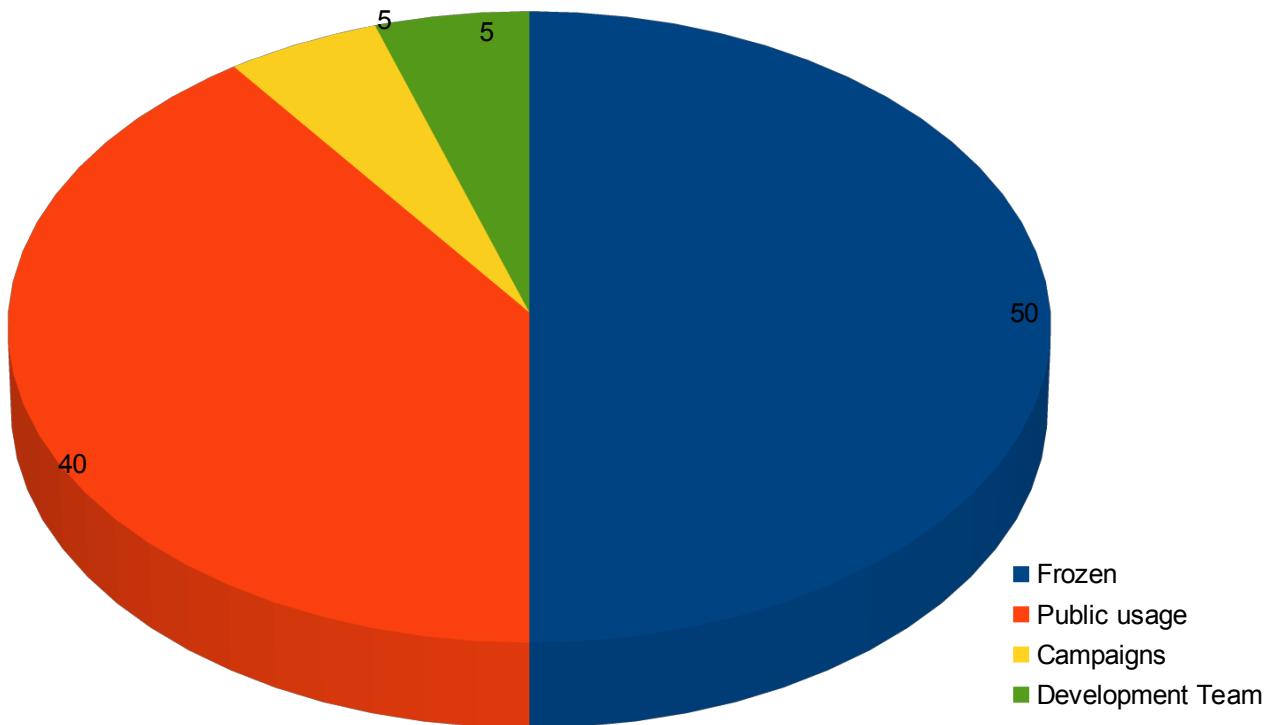

H2O coin is already listed and has its own dedicated **SWAP Smart Contracts** with different pairs to prove it's interchangeability and swappable status on TRON Blockchain's dedicated Swap Facility at [JustSwap](#)

We will officially apply to get listed in other DEXes when the initial 20 Million coins are sold to the public.

TOKENOMICS

Coin Details:

Blockchain:	TRON
Type:	TRC 20
Precision:	18
Coin Name:	WATER H2O
Coin Symbol:	H2O
Total Supply:	1 Billion
Initial Price:	2 TRX

ROAD MAP

FEBRUARY 2021

WATER H2O Coin Smart Contract deployed on TRON blockchain

FEBRUARY 2021

www.tokenh2o.com domain name registered
Website Version 1.0.1 released
Website Version 2.1.2 improvements under development

APRIL 2021

www.h2ocharity.org domain name registered
Website Version 1.0.3 released
Website Version 1.5.2 improvements under development

MAY 2021

BUY H2O, WATERMAKER, DONATE H2O, SWAP H2O, TRADE H2O, HYDRATION
Smart Contracts development started

JUNE 2021

BUY H2O, WATERMAKER, SWAP H2O, Smart Contracts deployed

JULY 2021

Private sales negotiations started.
HYDRATION and WATERMAKER Smart Contracts are under final testing

SEPTEMBER – DECEMBER 2021

Full development completion and public releases
